PROFILE

Frontend-focused Software Engineer working full-time as a Fullstack Developer, combining Ruby on Rails/Hotwire backend work with a design background in Figma and UI/UX. Comfortable owning features end-to-end — from wireframe to shipped, production-grade UI — and currently deepening backend skills on the job. Looking for remote frontend or fullstack roles with async-friendly teams; based in Indonesia (GMT+8), currently learning German with an eye toward the European market long-term.

EXPERIENCE

- Fullstack Developer** — PT. SUM Digital Konsultan

Denpasar, Bali · Remote-eligible team

Nov 2025 – Present

 - Contribute to Akasa SkyLens, a production drone-booking and cinematography platform, across admin-facing features and operator-side verification flows.
 - Implemented a multi-step checkout flow with email-based OTP verification and a customer identity/session system, used in live production traffic.
 - Built a Stimulus-based toast notification system and app-wide dark/light theme switching with Tailwind CSS, adopted across all user-facing surfaces.
 - Shipped an operator-facing QR verification flow for on-site drone pickup confirmation.
 - Transitioned from a pure frontend background into fullstack work, picking up Ruby on Rails and Hotwire (Turbo + Stimulus) on the job.
- Freelance Frontend Developer** — Self-employed

2024 – Present

 - Deliver website design and development for independent clients across hospitality and consumer brands, handling both visual design and implementation.
 - Redesigned whitepennybali.com, a hostel/restaurant/co-working brand in Seminyak, Bali — repositioned the site's brand concept and rebuilt its page architecture (Stay, Eat, Work, Play) using Sitejet.
 - Worked directly with clients to translate feedback and reference material into structured implementation tasks.
- Frontend Web Developer Intern** — PT. Appkey

Aug 2024

 - Fixed bugs and shipped client-requested features on a live website project as part of a team.
 - Optimized CSS and image assets, reducing page load time on the main landing page.
 - Collaborated with QA to prepare test data and tune map rendering performance using Leaflet.js.
- Web Developer, Kampus Merdeka** — PT. Amanah Karya Indonesia

Feb – Jun 2024

 - Built two team projects end-to-end: a sports-field reservation system (Laravel, Bootstrap 5) and a social-media clone with posts, comments, follows, and bookmarks.
 - Completed a structured curriculum covering HTML/CSS/Bootstrap, JavaScript/jQuery, PHP/Laravel, MySQL, and database/ERD design, plus professional communication practices for remote/async collaboration.

SELECTED PROJECTS

- Campus Space Reservation System** — Politeknik Negeri Bali — Academic Capstone

2024

 - Fullstack room-booking and scheduling system with QR check-in, built with Laravel; designed the database schema and role-based dashboards for Admin, Lecturer, and Student roles.

EDUCATION

- Politeknik Negeri Bali**

2021 – 2025

Diploma/Bachelor in Software Engineering — GPA 3.76 / 4.00. Relevant coursework: Web Programming, UI/UX, OOP, Database, Mobile Programming.
